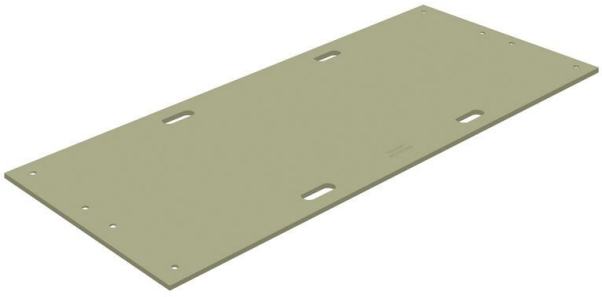
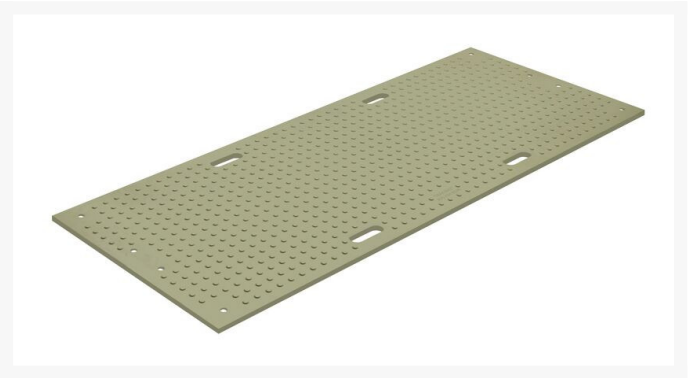
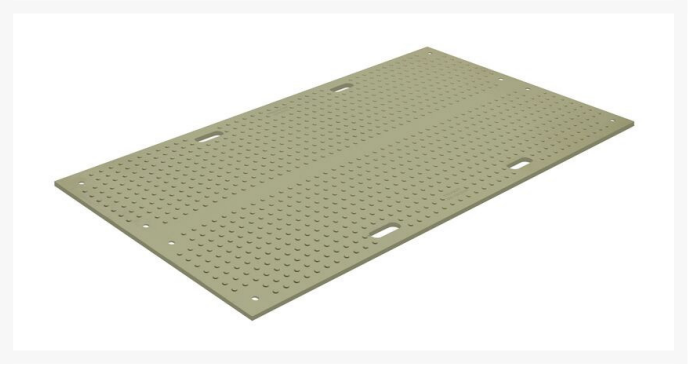
TrakMAT® Heavy Equipment Mats

Product Images







Short Description

- Protects lawns and sensitive surfaces from vehicle and equipment damage
- Supports loads up to 90 tons for reliable performance with heavy equipment
- Power cylinder tread improves traction and prevents vehicles from getting stuck
- Unique weather-resistant design follows ground contours while maintaining effective load distribution in any conditions
- Lightweight and easy to deploy by hand, with hand holes for convenient setup
- Available in multiple sizes, colors, and tread options to match your project needs
- Non-conductive material is safe for use near power lines and utilities

Description

TrakMAT ground protection mats are designed to deliver reliable traction and surface protection for commercial-grade projects that demand both durability and care for sensitive ground. Manufactured from

high-density polyethylene, TrakMAT mats are lightweight yet tough, supporting loads up to 90 tons. These mats are ideal for landscaping, groundworks, and construction sites where access is needed for trucks, loaders, and other medium-duty vehicles. Their construction allows them to contour to uneven or sloping ground, helping to prevent ruts and minimize damage to grass, turf, sidewalks, and driveways.

A key feature of TrakMAT is its unique power cylinder nub tread, which provides excellent grip for vehicles while reducing the risk of surface damage. You can choose between two tread options: power cylinder nub tread on both sides for maximum traction, or power cylinder nub tread on one side with a smooth surface on the other. The smooth side is especially useful when working on asphalt, concrete, or other hard surfaces, as it helps prevent tread marks and protects finished surfaces from degradation.

TrakMAT mats are easy to deploy by hand, equipped with hand holes for convenient handling and quick setup. They can be rapidly connected to create temporary roadways, stable access routes, or work pads, making them a trusted choice in the green industry and for utility maintenance. Available in a variety of sizes, colors, and tread configurations, TrakMAT can be tailored to fit your specific project needs. Simply select your preferred options above to view detailed product information, images, and pricing for your chosen configuration.

Every TrakMAT comes with a six-year limited warranty, ensuring dependable performance season after season.

Load capacity may vary based on mat size and ground conditions. Full specifications and images will display after you select your configuration options.
